**EASY  
AND  
BETTER!**

## **PUSH IN**

WESTEC is proud to announce THE NEW SERIES OF HEAVY DUTY CONNECTORS INSERTS with PUSH-IN technology.

Save your time and cost!

With the Westec PUSH IN inserts you will drastically reduce the wiring time up to 80%. All you need is to simply insert the wire in the clamping point and the connection is completed.

No tool and no leaning surface is required during wiring and the connection result is a reliable vibration-shock resistant one.

The front clamping point allows the maintenance, the wiring, and the electrical test running, without detaching the insert from the housing.

High contact force between conductor and current bar, guaranteed from a stainless steel compression spring, offer you a 100% safe connection system.

The PUSH IN insert series is available for the complete range from 6 up to 48 poles and is suitable for both solid wire and stranded wire with bush terminal.

The Westec PUSH IN inserts also allow the connection of 2,5 mm<sup>2</sup> stranded wire without bush terminal reducing even more your cost!

WESTEC PUSH IN: a new vibration-shock proof insert to wire HEAVY DUTY CONNECTORS reducing cost and time! Easy and Better.
